Air Mesh

Strong, soft and breathable fabric lining composed of a double layer: an inner part that attracts and absorbs sweat, and a more compact and durable outer part.

The stabilizer arch controls the bending and flexing of the shoe, allowing freedom of movement only in the correct points. An exclusive technology that combines maximum comfort with maximum safety.

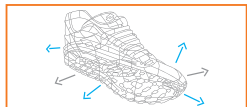

The FLYcap toe cap, made of composite material, offers perfect thermal and electrical insulation and is resistant to water, acids and atmospheric agents. The aluminium ALcap toe cap offers the same protection as FLYCap, with the great advantage of weighing half as much.

Light, innovative midsole preventing perforation (antiperforation "zero" - according to the law EN 12568:2010) and offering exceptional flexibility.

METALFREE

Protected by the FLYcap toe cap in composite material and by the fabric antiperforation midsole, metalfree footwear is ideal for more comfortable movement.

The Adapto Memory Foam insole reduces the impact with the ground while offering maximum comfort, supporting and conforming to the foot.

The rubber sole HRO (Heat Resistant Outsole) provides great resistance to heat from contact and abrasion.

Double Laces

A double lace in different colours to personalise the footwear, but above all to provide an immediate spare for a shoe component that is subject to wear.

Teflon®

Teflon® treated fabric.
